

# \$BASIC Whitepaper V1

BASIC stands for parity on the blockchain. Everyone starts at 0. On most days developers and teams play dirty and try to guarantee themselves an advantage at launch. Over here we are keeping it basic. There is something beautiful in simplicity:

1. Our smart contract is built to be as basic and streamlined as possible. Usually teams and developers worry about recovering the cost of deployment. With \$BASIC, the contract deployment cost is minimised to the smallest amount possible. No need to recoup.
2. The token for \$BASIC was launched with 0/0 tax and LP is burnt. No need to farm.
3. The contract has no functions to change tax as it is made to be as basic as possible. No need for renounce.

\$BASIC ushers in a new meta of parity, fairness, and good sportsmanship on-chain.
